

Software, Commercial Off-the-Shelf (COTS) and Related Services

OnData is honored to offer our cloud-based Software-as-a-Service (SaaS) solution named OnData Secure Data Management Platform and related services with this Texas Department of Information Resources (DIR) contract under the DIR's [Cooperative Contracts Program](#).

Contract Information

Contract Number: [DIR-CPO-6138](#)

This contract offers the OnData Secure Data Management SaaS Platform and related services that focus on data management, data security, and data privacy. Leveraging our patented technologies, the OnData platform enables organizations to automate the discovery, cataloging, classification, and protection of their sensitive data and implements data-centric, zero-trust security to protect their data from both external and internal threats. It comes with three products: SecureDB, SecureFile, and SecureAI.

- **SecureDB:** Enables organizations to automatically discover, catalog, classify, and protect sensitive data in databases and semi-structured data files, such as CSV, XML, JSON, Parquet and EDI
- **SecureFile:** Enables organizations to automatically discover, catalog, classify, and protect sensitive documents and files, including Office documents, PDF files, images, and videos. Sensitive files are protected at all times and securely shared with authorized users. Detailed audit logs are available for all access to sensitive files.
- **SecureAI:** Enables organizations to leverage the full power of GenAI Large Language Models (LLMs) with their internal data for insights and workflow automation, while keeping all data inside their environments and preventing unauthorized access.

The OnData solution can integrate with customers' existing Identity and Access Management (IAM) systems for convenient access control, with detailed audit logs to track all access to the protected data.

OnData also provides product-related services to customers so that they can effectively implement and use the OnData solutions. The related services include business analysis, architectural design, product configuration, system integration, training, and other technical services for the products included in this contract. Please contact us for more details on the products and services offered through this contract.

TX-RAMP Certification

The OnData Secure Data Management SaaS Platform is TX-RAMP Level 2 certified. You can find Texas DIR's list of TX-RAMP certified Cloud Products [here](#).
