

SecureAI

Protect Sensitive Data.
Power Confident AI.

OnData SecureAI protects sensitive data across the entire AI lifecycle—so your organization can innovate with AI without compromising security, privacy, or compliance.

Protect data in use, in transit, and at rest across AI workflows

Enforce least-privilege access with granular, policy-driven controls

Monitor and audit AI interactions with sensitive data

Stay compliant with built-in privacy and regulatory safeguards

AI Innovation. Data Protection. You Don't Have to Choose.

AI systems need data to deliver real value—but sensitive data introduces real risk. SecureAI ensures your organization can safely leverage AI technologies by keeping your data protected at every step.

Secure Every Step of the AI Lifecycle

DATA INGESTION

Discover and classify sensitive data before it enters AI systems.

MODEL DEVELOPMENT

Protect training data and enforce access controls throughout model development.

DEPLOYMENT

Secure AI applications with runtime policy enforcement and encryption.

INFERENCE & OUTPUT

Prevent data leakage in prompts, responses, and AI-generated content.

MONITOR & IMPROVE

Continuously monitor, audit, and refine policies to adapt to evolving risks.

Why OnData SecureAI?

AI-Ready Data Protection

Automatically classifies and protects sensitive data before it's used in AI models, prompts, or outputs.

Granular Access Control

Enforces need-to-know access for users, applications, and AI agents—down to the data element.

Real-Time Policy Enforcement

Applies policies dynamically across AI workflows to prevent unauthorized exposure or leakage.

Comprehensive Visibility

Monitor, log, and audit all AI interactions with sensitive data for transparency and accountability.

Built for Compliance

Support for HIPAA, GDPR, CCPA, NIST, and more—with encryption, masking, and tokenization.

Designed for Every AI Use Case

AI Assistants
& Copilots

Applications

About OnData

OnData is a data-centric data security platform built to protect sensitive information at all times. Instead of relying only on perimeter, infrastructure or application controls, OnData protects the data itself with patented encryption and access management technology. The platform helps organizations discover and classify sensitive data, apply the right protection policies, control access through existing identity and access management systems, and audit sensitive data usage across databases, documents, files, cloud environments and data workflows. OnData is designed for organizations that handle regulated or confidential information, including PII, PCI, HIPAA and CJIS data. By protecting data at the source and keeping it protected as it moves through business systems, OnData helps security, compliance and data teams reduce risk, simplify governance and make sensitive data safer to use for reporting, analytics and AI.
