

SecureFile

**Protect Sensitive Files.
Everywhere They Go.**

OnData SecureFile protects sensitive files across endpoints, file shares, cloud storage, and collaboration platforms with persistent encryption and granular access controls.

Protect at Rest and in Transit
Encrypt files wherever they are stored or shared.

Granular Access Control
Enforce need-to-know access with dynamic policy controls.

Maintain Visibility
Track file activity and access without exposing content.

Work Anywhere, Secure Everywhere
Enable productivity across cloud, hybrid, and on-prem environments.

Persistent Protection for Every File. Everywhere.

Files are the lifeblood of your business—and the most targeted by attackers and insiders. SecureFile ensures your sensitive data remains protected across its entire lifecycle, without disrupting how work gets done.

Key Capabilities

Persistent Data Protection

Encrypt and protect files at creation and keep them secure wherever they move.

Granular Access Control

Apply dynamic, policy-driven access controls based on user, role, context, and content.

Real-Time Policy Enforcement

Automatically enforce policies in real time to prevent unauthorized access and sharing.

Comprehensive Visibility

Monitor file access, sharing, and activity with detailed audit logs and reporting.

Compliance Made Easier

Support HIPAA, GDPR, CCPA, PCI DSS, and other regulatory requirements.

Protect Files Across All Locations

Endpoints

Business Benefits

Reduce the risk of data breaches

Keep sensitive files protected from external threats and insider risks.

Maintain productivity

Enable secure collaboration without slowing down your teams.

Simplify data security

Centralize policies and management across all file locations.

Lower compliance costs

Automate controls and reporting to meet regulatory requirements.

About OnData

OnData is a data-centric data security platform built to protect sensitive information at all times. Instead of relying only on perimeter, infrastructure or application controls, OnData protects the data itself with patented encryption and access management technology. The platform helps organizations discover and classify sensitive data, apply the right protection policies, control access through existing identity and access management systems, and audit sensitive data usage across databases, documents, files, cloud environments and data workflows. OnData is designed for organizations that handle regulated or confidential information, including PII, PCI, HIPAA and CJIS data. By protecting data at the source and keeping it protected as it moves through business systems, OnData helps security, compliance and data teams reduce risk, simplify governance and make sensitive data safer to use for reporting, analytics and AI.
